

Notice Something NEW?

Infinedi is excited to announce our next steps into the future with the current release of our website, which is the most exciting to date. We have been listening to your feedback and have implemented several noticeable changes to our website, some of which have been many months in the making.

Since we went live with our new web portal in 2009, there have been several new versions, enhancements and training videos released. The latest version for VIC (Visually Integrated Claims) has been in beta testing for some time so Infinedi could bring you the best online experience possible. There are even more exciting changes coming in the weeks and months ahead!

You will notice that the new features will simplify the way you sort claims, view claims, view reports and ERAs (Electronic Remittance Advise/ANSI 835). You now have access to a cleaner and much more fluid approach to your claim data that will help you save time and keep track of your cash flow.

The following enhancements will go live on our website on Friday, September 17, 2010...

Visual Changes and New Icons

Changes to the Infinedi website including new graphics, new [icons](#) and a more visually appealing display of information, have all been developed to make your job easier. Some of the [icons](#) you will notice are planned for future releases. Details about those updates will be forthcoming.

NetCor

NET Correct™

As promised, Infinedi has delivered a universal online claim editor that will allow corrections to both ANSI 837P claims and Print Image claims. Infinedi, as always, will supply you with the necessary [training and educational materials](#) needed to navigate the new tool. (Infinedi will offer both [NET Correct™](#) and the old Print Image Editor for the next year at which time the Print Image Editor will be discontinued.)

Note: Providers sending ANSI 837P claims that were previously unable to access the Print Image Editor will continue to be unable to access the old [Print Image Editor](#). Claims that contain more ANSI data than Print Image claims can display, will only display in [NET Correct™](#). [Both editors](#) cannot be used on the same claim.

Batch Level Sorting

The latest version of our website will offer you the ability to sort your batches by column header. Sorting can be performed by batch/date, dollar amount, number of claims, batch message and [status](#) (i.e., reviewed, not reviewed, and recently updated).

Sort Columns

Status

Sort by Clicking on the header tab at the top of the column.

You can sort [status](#) by:

- Red = Not Reviewed
- Yellow = A change in Status
- Green = Reviewed

Carrier Response Reports

Another new feature that has been added is on the Carrier Response Report page. This is the page that provides a claim level view when clicking on the Report [light](#) from the Claim Processing Control Screen. Infinedi has organized Audits, Carrier Responses and ERA (*Electronic Remittance Advice/835*) on the same page, in chronological order, so the entire history of a particular claim, can be viewed from the Carrier Response Report page.

Worker's Compensation, Auto & Personal Injury

Claims with Attachments

Infinedi has done the research and we now have a plan to manage state specific mandates for Worker's Compensation claims. We now offer a printable fax coversheet that is created for each W/C/Auto/Personal Injury claim we receive. Payers that have the ability to receive electronic claims will receive the claim electronically from Infinedi. The provider will fax the attachment coversheet that is printed (*via the W/C Icon next to each W/C, Auto or PI claim*) from our website along with any pertinent information to a dedicated fax number. Claim and faxed attachments will be matched and forwarded on to the payer electronically.

Note: Print Image Claims can contain only 6 service lines. 60 service lines = 10 Claims = 10 fax coversheets Clients sending ANSI 837P claims can send up to 99 service lines at a time. 99 service lines = 1 Claim = 1 fax coversheet
